

Why do we accept flawed vaccines?

Products designed to protect should not injure or kill.
They should not require a tax-funded billion dollar
compensation program like the
VACCINE INJURY COMPENSATION PROGRAM
to sustain their continued use.

How many injuries and deaths due to flawed
vaccines are you willing to accept?

Those who profit in the billions from the sale of their
products should be financially responsible for injuries
and death their products cause.

But Congress gave full liability protection to vaccine
makers and providers in **1986**, removing any financial
incentive to improve safety.

**Can the pharmaceutical industry be trusted to make safe products?
Or do they have a history of fraud, marketing abuses, hiding risk
data, and putting profits before lives?**

Today, Merck is on trial, accused of falsification of the efficacy data on
the mumps portion of the MMR.

Merck is also on trial, accused of fraud, deceit, and negligence
regarding the HPV vaccine Gardasil.
