

# IT'S NOT MISINFORMATION. IT'S THE MISSING INFORMATION.

*Prices as of August 2019. Dose numbers are for pediatric schedule.*

## **MMR (MERCK)** — \$75.04/dose 2 doses

The Measles-Mumps-Rubella (MMR) vaccine contains DNA fragments from aborted fetal cells capable of causing insertional mutations and is contaminated with carcinogenic herbicide glyphosate (RoundUp®). Merck is currently being sued for fraud in federal court over efficacy data falsification for the mumps component of this vaccine.

## **DTAP/TDAP (GSK, SANOFI)** — \$24 to \$45/dose 6+ doses

The Diphtheria-Tetanus-acellular Pertussis vaccines contain neurotoxic aluminum and bovine casein, which may lead to immune reactions to cow's milk. The CDC pushes the off-label use (not approved by the FDA) of Tdap during each pregnancy without adequate safety studies on fetal exposure or on such frequent & repeated use.

## **HEPATITIS B (MERCK, GSK)** — \$23 to \$116/dose 3 doses

The HepB vaccines contain between 250 to 500 mcg of neurotoxic aluminum adjuvant and were monitored for safety in infants for only 4-5 days. Animal research shows that early exposure to the HepB vaccine impairs brain development & cognitive ability. If mother is negative for Hepatitis B, then the vaccine given at birth to her baby is all risk and zero benefit. A new vaccine (Heplisav-b by Dynavax), for adults, contains a novel adjuvant never used in humans before. Clinical trials revealed a safety signal for heart attack.

## **HUMAN PAPILLOMAVIRUS (HPV) (MERCK)** — 217.11/dose 2-3 doses

Gardasil 9 was tested against its aluminum adjuvant instead of a saline placebo, and both groups reported high rates of autoimmune disorders. Worldwide injuries and deaths are reported. Merck is on trial for fraud regarding this product. Suggested book reading: HPV VACCINE ON TRIAL: SEEKING JUSTICE FOR A GENERATION BETRAYED.

## **FLU VACCINES (SEVERAL MAKERS)** — \$15 to \$24/dose annual

Often less than 10% effective. Any protection afforded wanes quickly; prior vaccination decreases effectiveness. Multi-dose vials contain 25mcg of neurotoxic mercury per dose. Flu shot injuries top the list of VICP (Vaccine Injury Compensation Program) petitions.

### **INJURIES ON FEDERAL VACCINE INJURY TABLE OR FROM VACCINE INJURY COMPENSATION CASES**

Guillain-Barre syndrome (GBS) • Shoulder/arm injuries (SIRVA) • Transverse myelitis • Acute disseminated encephalomyelitis • Brachial neuritis • Neuromyelitis optica or optic neuritis • Chronic inflammatory demyelinating polyneuropathy • Polymyalgia Rheumatica • Complex Regional Pain Syndrome • Parsonage Turner Syndrome • Encephalopathy • Neurologic Injuries • Cardiac Arrhythmia • Cerebral Palsy • Seizure Disorder • Cognitive Delays • Multiple Sclerosis (MS) • Sudden Infant Death Syndrome (SIDS)
