

Rebuttal to NFID's Addressing Adult Vaccine Hesitancy in the US

June 30, 2023

ICWA

The Presenters

- William Schaffner, MD - NFID Medical Director
 - <https://www.nfid.org/person/william-schaffner-md/>
- Ruth M Carico, PhD, DNP, FNP-C, CIC
 - <https://www.mass-vaccination-resources.org/webinar/presenter/ruth-carrico/>
- Rupali J. Limaye, PhD, MPH, MA
 - <https://publichealth.jhu.edu/faculty/2855/rupali-j-limaye>

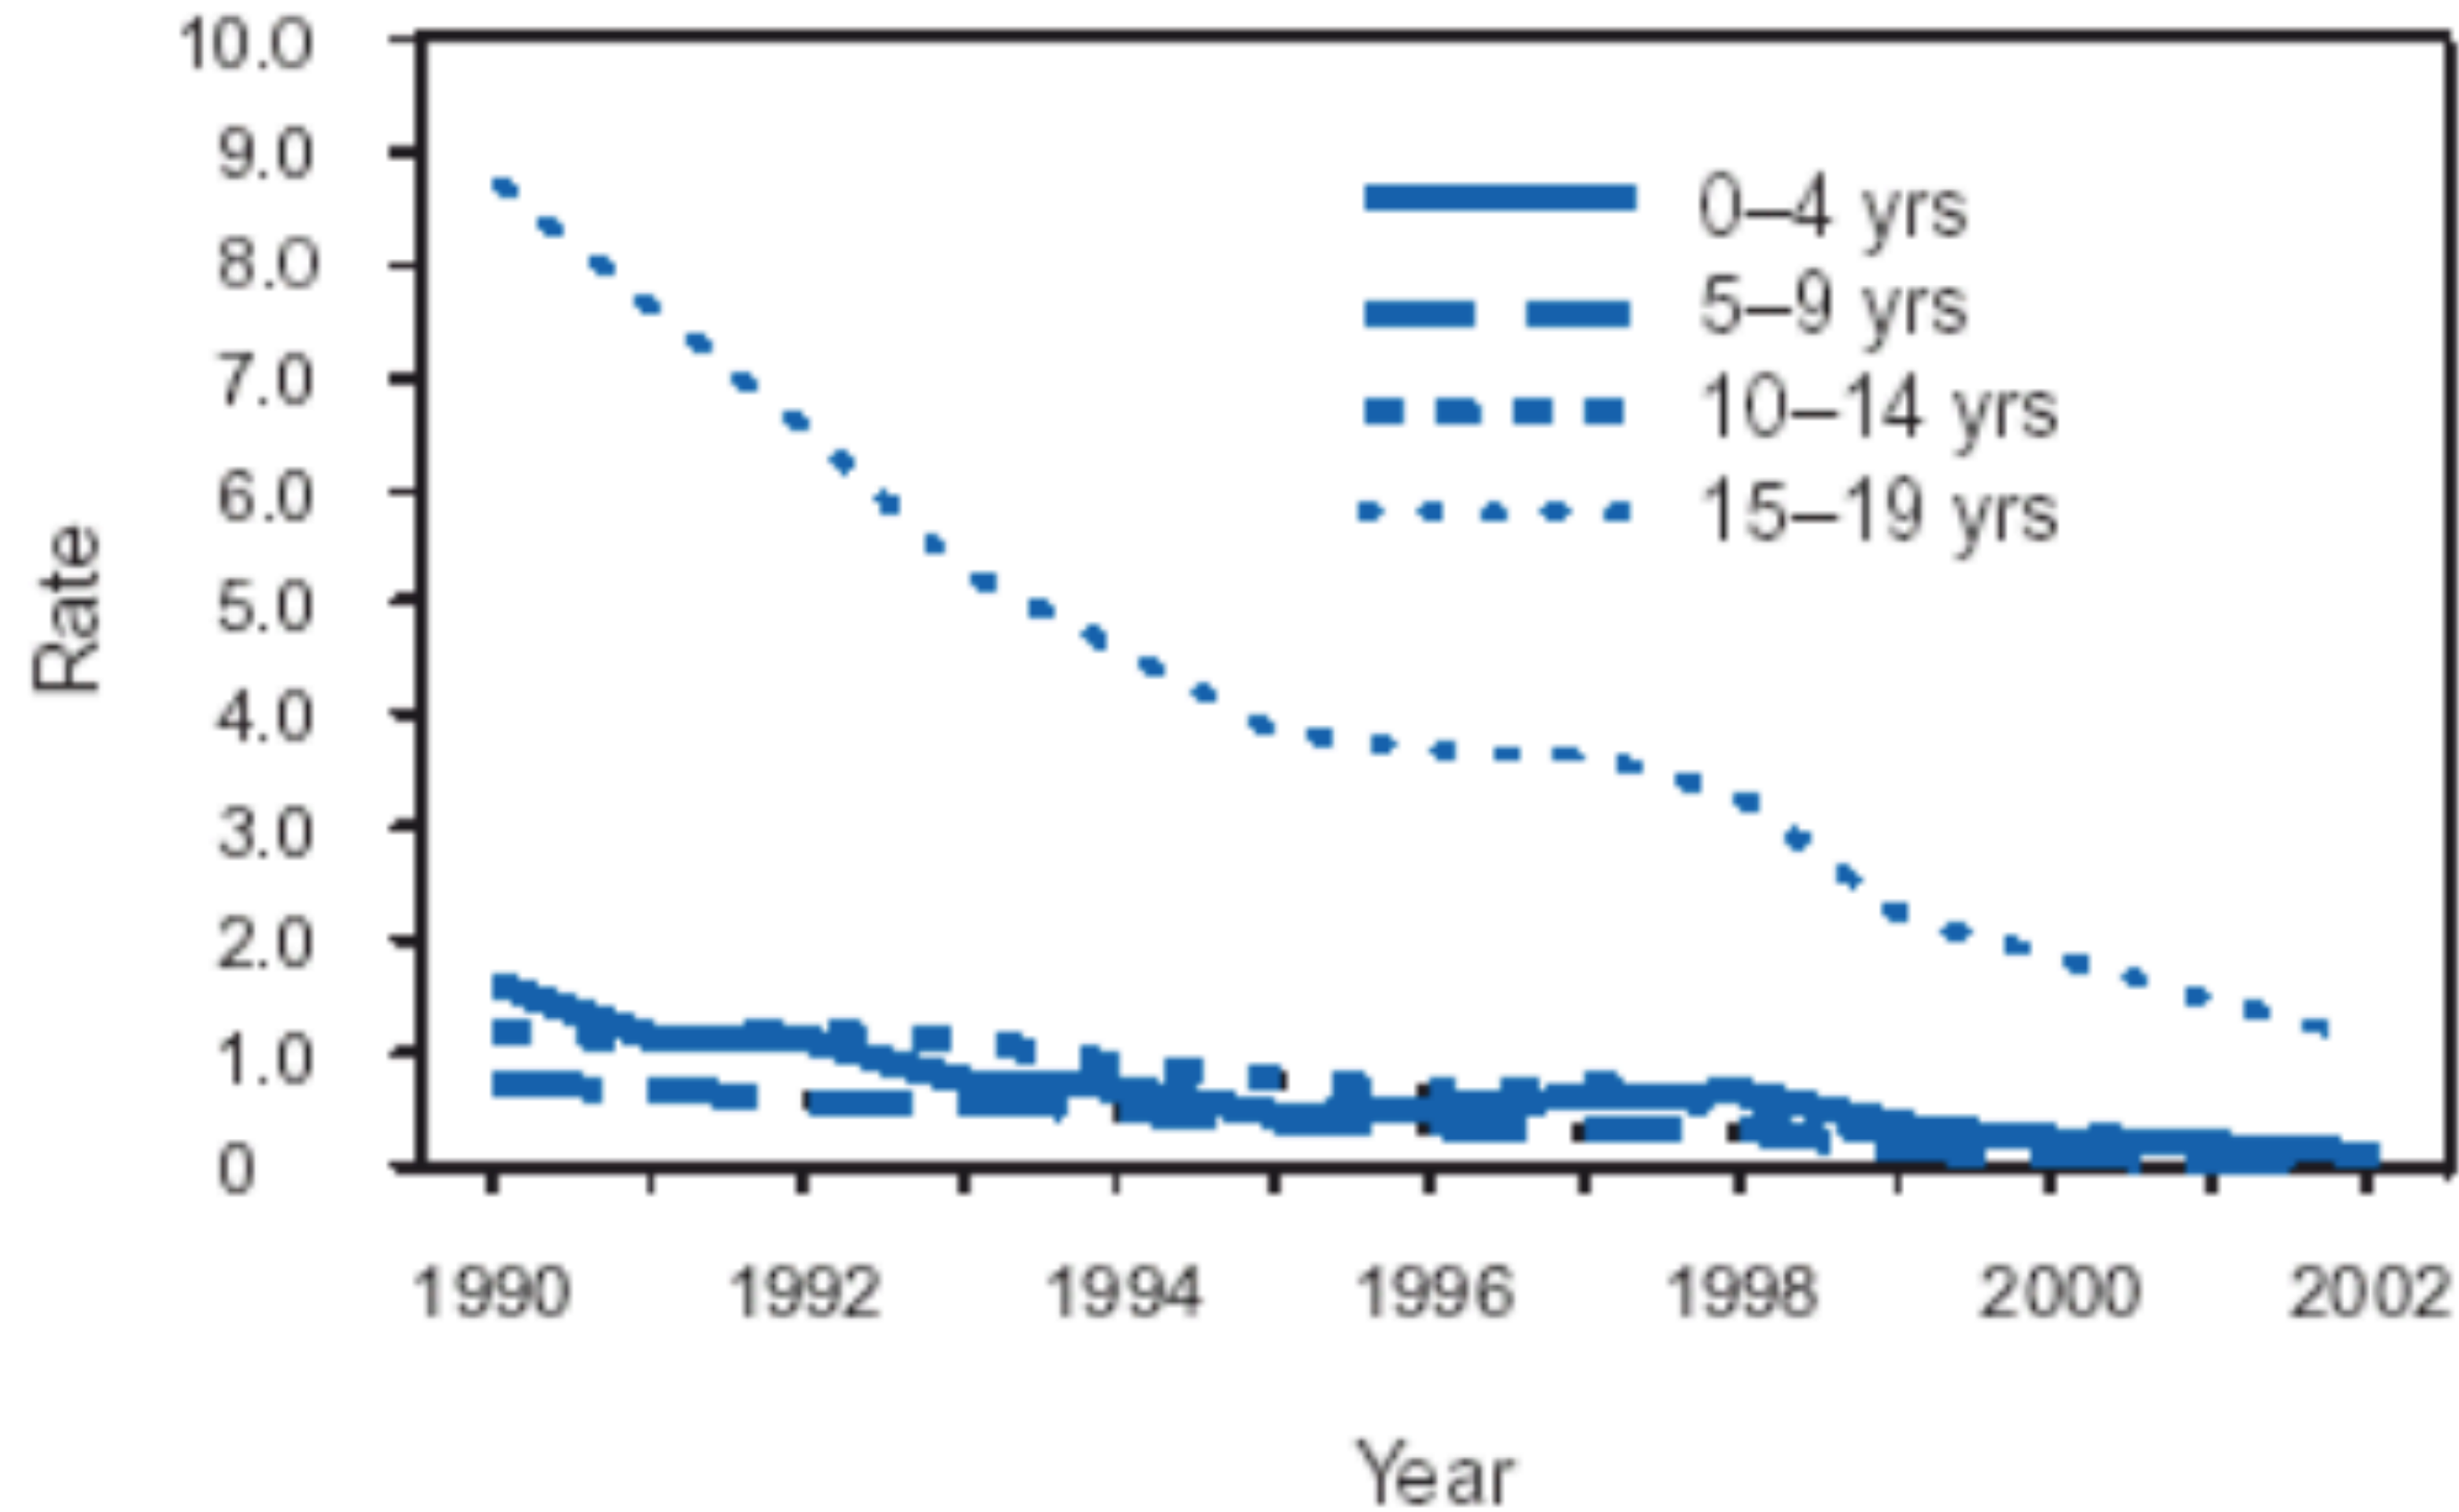

Hepatitis B Worldwide Prevalence

- “When we think about infectious diseases around the world, we are our brothers and sisters keepers. So what goes on anywhere in the world has relevance to us everywhere in the world.”
- Does this make sense? How can a vaccinated person in Seattle prevent a drug addict or sex worker from spreading HepB in Thailand?

Hepatitis B Worldwide Effectiveness

- Heplisav-B is relatively new and has a novel adjuvant never used in humans before, cardiac safety signal found in clinical trial, mfg required to monitor in aftermarket studies, no long term data
- 68% drop in children credited to vaccination? Or was it universal screening of pregnant women?
- ~4 million infants a year who are NOT AT RISK OF HeP B infection are exposed to HepB vaccine & aluminum adjuvants on day of birth unnecessarily. All risk, no benefit for the child.
- CDC aluminum adjuvant & persistent asthma [https://els-jbs-prod-cdn.jbs.elsevierhealth.com/pb/assets/raw/Health%20Advance/journals/acap/Aluminium Exposure Article-1664288052690.pdf](https://els-jbs-prod-cdn.jbs.elsevierhealth.com/pb/assets/raw/Health%20Advance/journals/acap/Aluminium%20Exposure%20Article-1664288052690.pdf)
- Animal & human studies clearly show vaccination ineffective in the first months of life (more on this later)

FIGURE 1. Rate* of acute hepatitis B in children and adolescents, by age group and year — United States, 1990–2002

* Per 100,000 population.

Flu

- Flu case numbers exaggerated every year — actual influenza cases combined with “ILI” influenza like illness and pneumonia
- <https://informedchoicewa.org/all-flu-news/>
- According to vaccine industry insiders like Robert Malone, flu manufacturing is considered “Warm Manufacturing” to maintain capacity for rapid ramp up
- EU Wants Pharma To Offer ‘Ever-Warm’ Vaccine & Drug Production Capacity — Facilities Would Be Quickly Available In Future Health Crises

Pneumococcal pneumonia

- Bacteria Whack-a-Mole

How Well Do These Vaccines Work?

Summary

PCV15 and PCV20 are new vaccines, so there are no data on how well these vaccines work in real-world conditions. However, these vaccines were approved because clinical trial data indicate they cause an immune response similar to PCV13, which has been shown to protect against serious pneumococcal infections.

<https://www.cdc.gov/vaccines/vpd/pneumo/public/index.html#how-well-vaccines-work>

Pneumococcal pneumonia

- Turtles All the Way Down

HHS'S CHILDHOOD SCHEDULE: ONE DAY TO 6 MONTHS OF LIFE			
VACCINE TYPE	TEST GROUP RECEIVED	CONTROL GROUP RECEIVED¹⁵	PLACEBO CONTROL?
DTaP	Infanrix (GSK)¹⁶	DTP	NO
	Daptacel (Sanofi)¹⁷	DT or DTP	NO
Hib	ActHIB (Sanofi)¹⁸	Hepatitis B Vaccine	NO
	Hiberix (GSK)¹⁹	ActHIB	NO
	PedvaxHIB (Merck)²⁰	Lyophilized PedvaxHIB ²¹	NO
Hepatitis B	Engerix-B (GSK)²²	No control group	NO
	Recombivax HB (Merck)²³	No control group	NO
Pneumococcal	Prevnar 13 (Pfizer)²⁴	Prevnar ²⁵	NO
Polio	Ipol (Sanofi)²⁶	No control group	NO

Tdap

Repeated vaccination leads to the danger of hyperimmunization. This is of particular concern for the tetanus vaccine. See PMID 3499712, 8491525, 22235053, 22875539, 23238161, 25430703.

“Because of linked-epitope suppression, all children who were primed by DTaP vaccines will be more susceptible to pertussis throughout their lifetimes, and there is no easy way to decrease this increased lifetime susceptibility.” ”

The 112-Year Odyssey of Pertussis and Pertussis Vaccines
—Mistakes Made and Implications for the Future,
